

Question 1 

Max. score: 20.00

Sum of squares

Write a program to print sum of squares of N Natural numbers

Sample input

Sample output

5

55

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases.

Python 3.8 (python 3.8.10) 

```
1 n=int(input())
2 s=0
3 for i in range(1,n+1):
4     s=s+i*i
5 print(s)
```

Question 2 

Max. score: 30.00

Factors

Write a program to print factors of a given number

Sample input 

4

Sample output 

1 2 4

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass

Python 3.8 (python 3.8.10) 

 Auto-c

```
1 n=int(input())
2 for i in range(1,n+1):
3     if n%i==0:
4         print(i,end=' ')
```

Question 3 

Max. score: 30.00

Sum of factors

Write a program to print sum of factors of a given number

Sample input 

5

Sample output 

6

Note:

Python 3.8 (python 3.8.10) 

```
1 n=int(input())
2 s=0
3 for i in range(1,n+1):
4     if n%i==0:
5         s+=i
6 print(s)
```

Question 4

Max. score: 30.00

Highest Common Factor

print the Highest Common Factor for given 2 numbers

Sample input

Sample output

2
4

2

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

Limits

Time Limit: 5.0 seconds

Python 3.8 (python 3.8.10)

✓ Au

```
1 a=int(input())
2 b=int(input())
3 f=0
4 for i in range(1,b+1):
5     if a%i==0 and b%i==0:
6         f=i
7 print(f)
```

Question 5

Max. score: 20.00

N natural

Write a program to print N natural numbers using While loop

Sample input

Sample output

5

1 2 3 4 5

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must be able to handle any input.

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 for i in range(1,n+1):
3     print(i,end=' ')
```

Question 6

Max. score: 30.00

Python 3.8 (python 3.8.10)

✓ A

Hello world N times

print Hello World for given number of times

Sample input

Sample output

3

Hello World
Hello World
Hello World

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

Limits

```
1 n=int(input())
2 for i in range(n):
3     print('Hello World')
```

Question 7

Max. score: 30.00

Even factors

Write a program to print even factors of a given number

Sample input

10

Sample output

2 10

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

Limit:

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 for i in range(1,n+1):
3     if n%i==0 and i%2==0:
4         print(i,end=' ')
```

Question 8

Max. score: 30.00

Python 3.8 (python 3.8.10)

Auto-c

Perfect Number

Write a program to print "Perfect" if the given number is a perfect number else print "No"

Sample input

Sample output

6

Yes

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

Limits

```
1 n=int(input())
2 s=0
3 for i in range(1,n):
4     if n%i==0:
5         s+=i
6 print('Yes' if s==n else 'No')
```

Question 9

Max. score: 30.00

perfect squares in given range

print perfect squares in the given range

Sample Input

Sample output

10

1 4 9

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem.

Python 3.8 (python 3.8.10)

```
1 h=int(input())
2 for i in range(1,n+1):
3     sq=i*i
4     if sq<=n:
5         print(sq,end=' ')
6
```

Question 10

Max. score: 30.00

Python 3.8 (python 3.8.10)

Odd numbers and count

Write a program to print Odd numbers and their count in given range by using While loop

Sample input

Sample output

10

20

11 13 15 17 19

5

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

```
1 a=int(input())
2 b=int(input())
3 c=0
4 for i in range(a,b+1):
5     if i%2==1:
6         print(i,end=' ')
7         c+=1
8 print()
9 print(c)
```

Question 11 

Max. score: 30.00

Even or Prime

If the given no. is even, print 1

prime. print 0

else print -1.

Note : consider '2' as even no. only

Sample input

Sample output

7

0

Python 3.8 (python 3.8.10) 

```
1 t=n=int(input())
2 c=0
3 for i in range(1,n+1):
4     if n%i==0 and n!=2:
5         c+=1
6 if c==2:
7     print(0)
8 elif t%2==0:
9     print(1)
10 else:
11     print(-1)
```

Question 12 

Max. score: 20.00

Factorial!

Print the factorial of given number

Sample input 

6

Sample output 

720

Explanation

Factorial

Python 3 (python 3.10) 

```
1 n=int(input())
2 f=1
3 for i in range(1,n+1):
4     f=f*i
5 print(f)
```

Question 13 ⓘ

Max. score: 30.00

Prime Number

Write a program to print "Yes" if the given number is prime else print "No". If the given number is Zero print "It is zero".

Sample input

Sample output

7

Yes

Note:

Python 3.8 (python 3.8.10) ▼

```
1 n=int(input())
2 c=0
3 for i in range(1,n+1):
4     if n%i==0:
5         c+=1
6 if c==2:
7     print('Yes')
8 elif n==0:
9     print('It is zero')
10 else:
11     print('No')
```

Question 14

Max. score: 30.00

Factors count

Write a program to print "Yes" if factors count is odd else print "No"

Sample input

Sample output

4

Yes

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases.

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 c=0
3 for i in range(1,n+1):
4     if n%i==0:
5         c+=1
6 if c%2==1:
7     print('Yes')
8 else:
9     print('No')
```

Question 15

Max. score: 20.00

Reverse of natural numbers

Write a program to print reverse of N natural numbers

Sample input

Sample output

5

5 4 3 2 1

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem.

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 for i in range(n,0,-1):
3     print(i,end=' ')
```

Question 16

Max. score: 30.00

print N even numbers

print N even numbers

Sample input

4

Sample output

2 4 6 8

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 for i in range(1,n+1):
3     print(i*2,end=' ')
```

Question 17 

Max. score: 30.00

Python 3.8 (python 3.8.10) 

 Auto

Even upto N

Write a program to print even numbers upto N.

Sample input 

Sample output 

5

2 4

Note:

Your code must be able to print the sample output from the

```
1 n=int(input())
2 for i in range(1,n+1):
3     if i<=n and i%2==0:
4         print(i,end=' ')
```

Question 18

Max. score: 30.00

Python 3.8 (python 3.8.10)

N even

Write a program to print N even numbers separated by commas

Sample input

Sample output

5

2,4,6,8,10

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases.

```
1 n=int(input())
2 flag=False
3 for i in range(1,n+1):
4     if flag:
5         print(end=',')
6     print(i*2,end='')
7     flag=True
```

Question 19

Max. score: 30.00

Upto N natural by ,

Write a program to print upto N natural numbers separated by a comma

Sample input

Sample output

10

1,2,3,4,5,6,7,8,9,10

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 flag=False
3 for i in range(1,n+1):
4     if flag:
5         print(end=',')
6     print(i,end='')
7     flag=True
```

Question 20 

Max. score: 30.00

print natural numbers and their sum

print the natural numbers upto N and their sum in next line

Sample input

Sample output

4

1 2 3 4

10

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases to solve the problem statement.

Python 3.8 (python 3.8.10)  

```
1 h=int(input())
2 s=0
3 for i in range(1,n+1):
4     print(i,end=' ')
5     s+=i
6 print()
7 print(s)
```
