

Question 1

Max. score: 30.00

Prime Number

Write a program to print "Yes" if the given number is prime else print "No". If the given number is Zero print "It is zero".

Sample input

Sample output

7

Yes

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass

Python 3.8 (python 3.8.10) 

```
1 n=int(input())
2 c=0
3 for i in range(1,n+1):
4     if n%i==0:
5         c+=1
6 if c==2:
7     print('Yes')
8 elif n==0:
9     print('It is zero')
10 else:
11     print('No')
```

Question 2

Max. score: 30.00

Even or Prime

If the given no. is even, print 1

prime. print 0

else print -1.

Note : consider '2' as even no. only

Sample input

7

Sample output

0

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 c=0
3 for i in range(1,n+1):
4     if n%i==0 and n!=2:
5         c+=1
6 if n%2==0:
7     print('1')
8 elif c==2:
9     print('0')
10 else:
11     print('-1')
```

Question 3 

Max. score: 30.00

Python 3.8 (python 3.8.10) 

 Auto

Prime upto N

Write a program to print prime numbers upto N.

Sample input 

15

Sample output 

2 3 5 7 11 13

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple test cases.

```
1 n=int(input())
2 for i in range(1,n+1):
3     c=0
4     for j in range(1,i+1):
5         if i%j==0:
6             c+=1
7     if c==2:
8         print(i,end=' ')
```

Question 4

Max. score: 30.00

PRIMES in a given range

WAP to print the prime numbers in given range

Sample input

2
5

Sample output

2 3 5

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is not working.

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 num=int(input())
3 for i in range(n,num+1):
4     c=0
5     for j in range(1,i+1):
6         if i%j==0:
7             c+=1
8     if c==2:
9         print(i,end=' ')
```

Question 5

Max. score: 30.00

print the prime numbers upto given range separated by comma

you need to design a function which print prime numbers upto given range.

Sample input

Sample output

10

2,3,5,7

Python 3.8 (python 3.8.10) 

 Au

```

1  n=int(input())
2  f=False
3  for i in range(1,n+1):
4      c=0
5      for j in range(1,i+1):
6          if i%j==0:
7              c+=1
8      if c==2:
9          if f:
10             print(end=',')
11             print(i,end='')
12             f=True
13 
```

Question 6

Max. score: 40.00

WAP to check whether a no has prime no of factors or not.

WAP to check whether a no has prime no of factors or not.

Sample input

Sample output

13

yes

Explanation

n = 9

Factors of 9 : 1, 3, 9

Python 3.8 (python 3.8.10)

```

1  n=int(input())
2  fc=0
3  for i in range(1,n+1):
4      if n%i==0:
5          fc+=1
6  m=fc
7  c=0
8  for j in range(1,m+1):
9      if m%j==0:
10         ct+=1
11  if c==2:
12      print('yes')
13  else:
14      print('no')

```

Question 7

Max. score: 30.00

Prime of

Write a program to print "Yes" if sum of digits of a given number is prime else print "No"

Sample input

137

Sample output

Yes

Note:

Your code must be able to print the sample output from the provided sample input. However,

Python 3.8 (python 3.8.10)

```
1 n=int(input())
2 sum1=0
3 while n>0:
4     r=n%10
5     sum1+=r
6     n//=10
7 c=0
8 for i in range(1,sum1+1):
9     if sum1%i==0:
10         c+=1
11 if c==2:
12     print('Yes')
13 else:
14     print('No')
```

Question 8 

Max. score: 30.00

WAP to count number of prime no's in a given range. and if number of prime numbers count is prime print "yes" otherwise "no"

WAP to count number of prime no's in a given range. and if number of prime numbers count is prime print "yes" otherwise "no"

Sample input

Sample output

30 40

yes

Note:

Python 3.8 (python 3.8.10) 

 Auto-

```
1 a,b=map(int,input().split())
2 c=0
3 for i in range(a,b+1):
4     c1=0
5     for j in range(1,i+1):
6         if i%j==0:
7             c1+=1
8     if c1==2:
9         c+=1
10 c2=0
11 for k in range(1,c+1):
12     if c%k==0:
13         c2+=1
14 if c2==2:
15     print('yes')
16 else:
17     print('no')
```

Question 9 

Max. score: 30.00

N prime numbers

Write a program to print N prime numbers

Sample input

Sample output

4

2 3 5 7

Note:

Your code must be able to print the sample output from the provided sample input. However, your code is run against multiple hidden test cases. Therefore, your code must pass these hidden test cases.

Python 3.8 (python 3.8.10) 

 Run

```
1  n=int(input())
2  c=0
3  i=1
4  f=False
5  while c!=n:
6      c1=0
7      for j in range(1,i+1):
8          if i%j==0:
9              c1+=1
10         if c1==2:
11             if f:
12                 print(end=' ')
13             print(i,end='')
14             c+=1
15             f=True
16         i+=1
17
```

Question 10

Max. score: 30.00

PRIMORIAL NUMBER

primorial number is *is similar to factorial of a number*, *In primorial*, not all the natural numbers get multiplied, *only prime numbers are multiplied to calculate the primorial of a number*. It is the product of the first n prime numbers.

INPUT:

Given a positive number N

Sample input

Sample output

3

30

Python 3.8 (python 3.8.10)

✓ Au

```
1 h=int(input())
2 c=0
3 i=1
4 p=1
5 while c!=n:
6     c1=0
7     for j in range(1,i+1):
8         if i%j==0:
9             c1+=1
10        if c1==2:
11            p=p*i
12            c+=1
13        i+=1
14 print(p)
```

prime pairs with difference 6

given a range from 'm' and 'n' and you have to print how many prime pairs with difference 6 present in that range

decription: for example given a range 4 and 40 and in that 5 is a prime number.and 6 added to that 5 we get 11.so the 5 and 11 are prime pairs with difference 6.so you have to increment the count.and after the end of process you have to return how many prime pairs present in that range.

the co primes are:

(5,11),(7,13),(11,17),(13,19),(17,23),(23,29),(31,37)

so the output is 7

Sample Input

Sample output
